

Articulate Storyline Project

Revision Summary

Kevin Smith

Why is it Important? - First slide

Adjusted timing of some of the items on the slide based on feedback.

Web Pages/Videos Opening in New Window

Similar to comments I received on my Articulate Studio project, one reviewer suggested I embed the web pages with videos. I was able to get it to work technically in Storyline, but I didn't like how the web page was limited in size by the player. I opted to open in a new window/tab.

Final Assessment

I considered moving this into Articulate Storyline, but I like the Google Form because I can capture the data easily in a Google Sheet. I did add a name field to the form which I didn't have prior to testing.

Why is it Important? - Typo

Fixed typo on this page based on feedback from reviewer.

References - Removed Next button

I removed the next button based on feedback from reviewer.

Timing Issues

I found a few timing issues on slides with my animations. I made these changes after testing.

*** I loved Storyline. I was skeptical because I love working on the Mac. I was working on an old, slow Win machine and the program was very responsive. I'm seriously considering trying to get a copy of this through my university to develop my online courses. I feel like I scratched the service on what I could do.*
