

# Articulate Studio Project

## Revision Summary

Kevin Smith

### Check for Understanding - Attempts

I changed these from 1 attempt to unlimited based on a reviewer's suggestion. Good suggestion!

### Check for Understanding - Feedback

I adjusted the size of the feedback so it was easier to read.

### Check for Understanding - Radio Buttons & Checkboxes

I adjusted the size because they were too small for one of my reviewers.

### User Controlled vs Auto Advance on Slides

I had a few slides that were still on auto and they should have been on user controlled. I fixed it.

### Web Pages/Videos Opening in New Window

One reviewer suggested I embed these, but I had trouble doing it. Articulate was giving me an error saying the page couldn't be embedded. I'm not sure I like how I ended up doing it, but I tested it on a non-tech person (my wife) and she didn't have any trouble knowing how to close the tab/window and returning to the module.

### Edit Audio

I went through and edited all of the audio to remove mouse clicks and extra sounds. The audio editor is very slick in Articulate. Initially I was thinking the audio editor would make me go into each individual slide. Being able to control all audio from the same location is awesome.

### Final Assessment

I considered moving this into Articulate, but I like the Google Form because I can capture the data easily in a Google Sheet.

### Interface Changes

After the initial review I made some changes to the menu and opening explanation to make it easy to know what was expected.

*\*\* I was skeptical about using Articulate because I really like working on the Mac. I was pleasantly surprised by how easy the program was and how many interactive features I could add quickly and easily. I could definitely see myself using this for rapid development of e-learning.*
